## The Spawn Mate Family of Supplements

	% Protein	Rate (%DWT)	General Characteristics
	54%	3% - 3.5%	A balanced nutritional content of lipids, carbohydrates, micronutrients, and multiple protein sources. <b>The Gold Standard.</b>
	41%	3%-4%	A carefully formulated blend of basic carbohydrates and proteins from plant and animal sources. Gives you the power to produce at lower protein levels, with controllable temperatures.
	48%	4%-4.5%	Combines the benefits of delayed release with a specially formulated mixture of inorganic compounds and animal proteins. Titanium - M contains Mertect 340 - F.
	41%	4% - 4.5%	Full nutritional complement formulated to minimize the temperature surge during spawn run.
	41%	3%-4%	The addition of corn gluten meal to our premium animal-free protein blend kick starts spawn runs but still allows for controllable temperatures.
	45%	4%	Balanced formulation of multiple protein sources, carbohydrates, and fats, treated to minimize heating during spawn run.
	54%	3%-3.5%	For use in organic mushroom production where approved by the certifying agency. All of the benefits of Gold without any chemical treatment.
	27%	Oysters	A blend of simple carbohydrates and a low protein content that is the ideal choice for oyster production.

Spawn Mate supplements are intended for use at spawning or at the time of casing in Phase III tunnel operations.

## The Amycel Family of Spawn Strains

	<p>Phoenix was designed to give growers an advantage in today's competitive marketplace by combining speed, productivity and quality. Phoenix is our most vigorous strain and is faster in all phases of growing and production. Phoenix produces mushrooms with excellent quality and density, while maintaining high yields.</p>
	<p>Amycel XXX was developed to give growers a high yielding strain that could easily be tailored to their specific market needs. XXX is an aggressive and very productive strain, which produces large heavy bodied mushrooms while maintaining competitive yields.</p>
	<p>Amycel Delta is one of our most consistent premium quality strains, and is the preferred strain and best producer on tray farms. Delta is a moderate pinner and will continue to size without opening allowing for a high percentage of large mushrooms. While Delta is suited for a variety of growing and compost conditions, for optimal productivity and quality ensure that compost moisture and dry weight are consistent.</p>
	<p>Amycel Maxx is a great fresh market strain. Maxx combines the productivity of Amycel 2200 with the sizing and quality of Amycel Delta. Maxx produces mushrooms with smooth round caps and solid dense tissue.</p>
	<p>Amycel 2200 is our most forgiving strain and consistently provides quality and productivity time after time under a variety of growing conditions. Pinsets are typically heavy with the mushrooms sizing uniformly. Caps are smooth under ideal conditions, but some scaling can occur as with any strain when humidity is low or air flow is excessive.</p>
	<p>Our newest traditional brown strain, Amycel 2468 was developed as an alternative for Portabella growers looking for faster pinsets and higher yields. 2468 is the most vigorous traditional brown strain currently available and is perfectly suited for the growers who want to produce a larger percentage of crimini sized mushrooms. This strain's faster cropping speed allows the grower the luxury of optimizing later breaks for Portabella production. Cropping is very even, making the product easy to pick.</p>
